ESET Corporate Solutions

Proactive digital security, bespoke solutions

If you are a large company or public agency seeking a digital security solution that matches your unique commercial and technical needs, ESET is your choice. Leveraging over 30 years of cybersecurity experience and global threat intelligence, we provide robust digital security solutions made in the EU, combining our standard products with proprietary core technologies and expert personnel.

Rooted in our time-proven, prevention-first approach and the combined power of AI and human expertise, our best-in-class multilayered security technology secures more than 1 billion users worldwide. Our unique position and expert capabilities are key to advancing your cyber resilience beyond standard compliance needs.

The largest global EU-owned & based company with over 35 years of experience in the cybersecurity industry

1 billion protected devices / security solutions are based on real threats that pose risk to organization

Long-term and consistent recognition by leading analysts for innovative and effective cybersecurity solutions

We work with 4 out of 7 magnificent seven multinational enterprises

High detection rates, low false positive and low performance impact

One of the strongest cyber threat research teams in the world

Social responsibility built on strong values and principled position against all forms of war, cyber or traditional

Customized solutions and comprehensive services building blocks.

Private and air-gapped cybersecurity solutions

With our cutting-edge technology built for autonomous operation, ESET's private solutions protect your valuable data and information from external threats in restricted environments. They are adaptable, supporting various levels of isolation, up to and including fully air-gapped and on-premise environments

B2B2X digital Security Solutions

Our partnerships with major service providers such as telcos, banks, insurance companies, and utility providers create new revenue streams for them, increase customer loyalty, and reduce churn. We do this by extending the end customer value proposition, leveraging integrated solutions using ESET technologies to secure customers' homes or businesses seamlessly.

ESET Scanning Solutions and Services

By leveraging our proprietary research, telemetry, and a range of technologies for detecting malicious files, ESET provides specialized solutions for complex and high-volume scanning and sandboxing. We offer diverse business models including scanning as a service and air-gapped or SDK scanners.

Embedded cybersecurity solutions

The embedding of ESET's core technologies and know-how into third-party-controlled environments or infrastructure enables the delivery of a full range of cybersecurity capabilities. Designed for specific purposes, the embedded solutions can fully align with and support long product lifecycles or a limited set of features of your products or services.

Cybersecurity professional services

Building on our proprietary research and time-tested expertise, ESET's strategic advisory and risk assessment services shape future-proof digital security solutions. These help customers position themselves ahead in the dynamic world of cyber threats and increase cybersecurity maturity and resilience..

Managed cybersecurity

Complementing ESET's standard products and services, our Corporate Solutions teams design complex solutions that integrate third-party components beyond ESET's technology. These solutions support infrastructure build-up and provide detection and response services around the clock and around the globe.

Operational technology (OT) cybersecurity solutions

Combining ESET's cybersecurity expertise with the engineering experience of OT partners, we design, build, and operate solutions and managed services. In this way, we seamlessly integrate the IT and OT worlds, enhance the visibility of end-of-life assets, and accommodate limited maintenance windows and other OT-specific requirements.

Thank you!
