Information Systems

SAP Information Systems

We provide customers with system integration, consulting and long-term services through multilingual support centre and shared services.

We have extensive experience and expertise, in various industry areas (automotive, manufacturing, and other industries), retail, logistics and transport, energy and utilities, banks and insurance companies as well as public administration.

**Long-term partnership
for your growth, with professional
approach and knowledge of the processes.**

 **25+ years**
of experience

 **220+**
SAP professionals

 **400+**
satisfied customers
in annual sales

 **EUR 24+ mil**
in annual sales

1 Our focus and industry

For SAP information systems we offer a wide portfolio of solutions and services. Among our customers, you can find companies and organizations from most of the key industries in the market. We have extensive experience and deep knowledge in addressing business issues across various sectors, including the process industry and manufacturing (such as automotive and other industries), retail, transportation and logistics, energy and utilities, banking and insurance, as well as public administration.

4 Management supply chains

SAP Extended Warehouse Management represents the next generation in supply chain and warehouse management. With our dedicated team of SAP Digital Supply Chain consultants, we help you maximize productivity by automating and optimizing traditional warehouse operations. We leverage technology to enhance human resources and equipment efficiency through task interleaving and implementing controls for space and equipment utilization.

7 Digital innovation with SAP BTP

Our experience with the cloud platform SAP Business Technology Platform (BTP) brings pre-configured applications to customers and tools to streamline business processes using modern technologies. SAP BTP acts as a Platform as a Service (PaaS).

2 ERP projects and transformations

For the implementation of new projects and the transformation of existing installations to SAP S/4HANA, we use the SAP Activate methodology for both On-premise and Cloud solutions, along with Hyper-care support after implementation. Our dedicated team is ready to perform specific conversions based on the chosen SAP S/4HANA processes. Of course, 24/7/365 SLA support is a given as well.

5 Management human capital

Our strong background in HCM service centers enables us to deliver a wide range of services, including HR business consulting, ROI analysis, solution design, implementation, and SAP HCM (Human Capital Management) support, as well as SAP SuccessFactors. Key offerings also include HR Business Process Outsourcing and Paperless HR, catering to a broad spectrum of SAP customers.

8 Design tailor-made development

In both cloud and on-premise environments, we offer more than 100 specialized applications for our customers. Our expertise includes launchpad customization, responsive design, localization, and the use of SAP Fiori Design Guidelines. By leveraging preconfigured applications and workflows, we significantly reduce the time and effort required for our customers to design tailored solutions.

3 ERP in the Cloud

A cloud ERP system is a business management software that instead of an on-premise solution uses an external infrastructure. It enables organizations to save time and costs by flexible internet access and the ability to easily change leased data. With a team of certified SAP consultants, we can help you implement both Public and Private SAP Cloud solutions.

6 BI technologies and solutions

The typical solutions and outcomes we offer our customers include data integration and transformation, comprehensive planning and reporting tools for tracking KPIs, static management reports, interactive dashboards for real-time decision-making, data layers and infrastructure, and training for self-service reporting. Additionally, we provide comprehensive, tailored applications, functionalities, and analytics.

9 Reliable 24/7 support

We have over 20 years of experience in system and application support, backed by a dedicated and extensive team of certified SAP specialists and support staff. As an SAP PartnerEdge partner with PCoE certification, we provide "1st Level support" and currently manage more than 100 supported systems across both on-premise and cloud environments.
